

**SIMATS ENGINEERING
ASSESSMENT TOOL 3**

COURSE NAME: Artificial Intelligence

COURSE CODE: CSA17

COURSE OUTCOME COVERED

CO3: *Analyze knowledge representation and reasoning using propositional logic, FOL, inference, resolution, chaining methods, knowledge representation to perform logical reasoning for drawing valid conclusions and decision making. (BL4)*

Assessment Tool Weightage: 20%

QUESTIONS: 5

**Time Duration: 1 Hour
Total Marks:30**

Annexure A

Resolution Algorithm Implementation

Code of Conduct:

I B Vijaykarthikkayan (19511348) (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.

I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student:

B Vijay Karthikkayan

Resolution Algorithm Implementation

Question 1 – Rain and Wet Ground

Knowledge Base

1. If it rains, then the ground becomes wet.
2. It is raining.

Goal

Prove that **the ground is wet** using the Resolution Algorithm.

Tasks

1. Represent the statements in propositional logic.
2. Convert all statements into CNF.

Negate the goal.

1. Apply the Resolution Algorithm step by step.
2. Show the Empty Clause ($\square$) if the goal is proved.

Answer:

Problem understanding: We must prove that the ground is wet from the facts that it is raining and that rain makes the ground wet.

1. Propositional representation: Let R = It is raining and W = The ground is wet.

Premise 1: $R \rightarrow W$

Premise 2: R

Goal: W

2. CNF conversion: $R \rightarrow W$ is equivalent to $\neg R \vee W$. Therefore, the clauses are $C1 = (\neg R \vee W)$ and $C2 = (R)$.

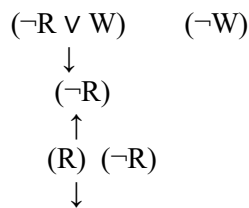

3. Negate the goal: $\neg W$ is added to the clause set as $C3 = (\neg W)$.

4. Resolution: Resolve $C1 (\neg R \vee W)$ with $C3 (\neg W)$. The complementary literals W and $\neg W$ cancel, giving $C4 = (\neg R)$.

5. Resolution: Resolve $C2 (R)$ with $C4 (\neg R)$. The complementary literals R and $\neg R$ cancel, giving $C5 = \square$ (Empty Clause).

Conclusion: The Empty Clause is derived. Therefore, the goal W is proved by resolution; hence, the ground is wet.

Resolution tree:

Question 2 – Student Assignment Submission Knowledge Base

1. If a student submits the assignment, then the student receives internal marks
2. Rahul submitted the assignment.
- 3.
4. **Goal**

Prove that **Rahul receives internal marks** using the Resolution Algorithm.

Tasks

1. Write the propositional logic expressions.
2. Convert the premises into CNF.

Negate the goal.

1. Apply the Resolution Algorithm.
2. Conclude whether the goal is proved.

Answer:

Problem understanding: We must prove that Rahul receives internal marks because Rahul submitted the assignment and submission implies receiving internal marks.

1. Propositional representation: Let S = Rahul submitted the assignment and M = Rahul receives internal marks.

Premise 1: $S \rightarrow M$

Premise 2: S

Goal: M

2. CNF conversion: $S \rightarrow M$ becomes $\neg S \vee M$. Clauses: $C1 = (\neg S \vee M)$, $C2 = (S)$.

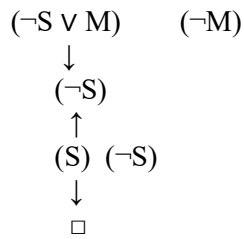

3. Negate the goal: $C3 = (\neg M)$.

4. Resolution: Resolve $C1 (\neg S \vee M)$ with $C3 (\neg M)$ to obtain $C4 = (\neg S)$.

5. Resolution: Resolve $C2 (S)$ with $C4 (\neg S)$ to obtain $C5 = \square$.

Conclusion: The Empty Clause is obtained, so the goal M is proved. Therefore, Rahul receives internal marks.

Resolution tree:

Question 3 – Library Membership

Knowledge Base

1. If a person is a library member, then the person can borrow books.
2. Priya is a library member.

Goal

1. Prove that **Priya can borrow books** using the Resolution Algorithm.

Tasks

1. Represent the knowledge base using propositional logic.
2. Convert each statement into CNF.

Negate the goal.

1. Perform resolution until no new clauses can be generated.
2. State the final conclusion.

Answer:

Problem understanding: We must prove that Priya can borrow books from the fact that Priya is a library member and every library member can borrow books.

1. Propositional representation: Let L = Priya is a library member and B = Priya can borrow books.

Premise 1: $L \rightarrow B$

Premise 2: L

Goal: B

2. CNF conversion: $L \rightarrow B$ becomes $\neg L \vee B$. Clauses: $C1 = (\neg L \vee B)$, $C2 = (L)$.

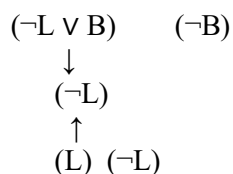

3. Negate the goal: $C3 = (\neg B)$.

4. Resolution: Resolve $C1 (\neg L \vee B)$ with $C3 (\neg B)$ to obtain $C4 = (\neg L)$.

5. Resolution: Resolve $C2 (L)$ with $C4 (\neg L)$ to obtain $C5 = \square$.

Conclusion: The Empty Clause is derived. Therefore, Priya can borrow books.

Question 4 – Placement Eligibility

Knowledge Base

1. If a student clears the aptitude test, then the student is eligible for placement.
2. Arun cleared the aptitude test.

Goal

1. Prove that **Arun is eligible for placement** using the Resolution Algorithm.

Tasks

1. Convert the statements into propositional logic.
2. Write the CNF clauses.
3. Negate the goal.
4. Apply the Resolution Algorithm step by step.
5. Draw the resolution tree and conclude.

Answer:

Problem understanding: We must prove that Arun is eligible for placement because clearing the aptitude test is sufficient for placement eligibility.

1. Propositional representation: Let A = Arun cleared the aptitude test and E = Arun is eligible for placement.

Premise 1: $A \rightarrow E$

Premise 2: A

Goal: E

2. CNF clauses: $A \rightarrow E$ becomes $\neg A \vee E$. Thus $C1 = (\neg A \vee E)$, $C2 = (A)$.

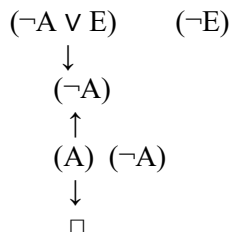

3. Negate the goal: $C3 = (\neg E)$.

4. Resolution step 1: Resolve $C1 (\neg A \vee E)$ with $C3 (\neg E)$, giving $C4 = (\neg A)$.

5. Resolution step 2: Resolve $C2 (A)$ with $C4 (\neg A)$, giving $C5 = \square$.

6. Conclusion: The Empty Clause is derived, so the negation of the goal leads to contradiction. Therefore, Arun is eligible for placement.

Resolution tree:

Question 5 – Access Control System

Knowledge Base

1. If a user enters the correct password, then the user is authenticated.
2. If a user is authenticated, then the user is granted access.
3. The user entered the correct password.

Goal

Prove that **the user is granted access** using the Resolution Algorithm.

Tasks

1. Represent the knowledge base in propositional logic.
2. Convert all implications into CNF.
3. Negate the goal.
4. Apply the Resolution Algorithm to derive the Empty Clause ($\square$).
5. Explain each resolution step and write the final conclusion.

Answer:

Problem understanding: The system uses two implications: entering the correct password authenticates the user, and authentication grants access. Since the user entered the correct password, we must prove that access is granted.

1. Propositional representation: Let P = The user entered the correct password, A = The user is authenticated, and G = The user is granted access.

Premise 1: $P \rightarrow A$

Premise 2: $A \rightarrow G$

Premise 3: P

Goal: G

2. CNF conversion: $P \rightarrow A$ becomes $\neg P \vee A$, and $A \rightarrow G$ becomes $\neg A \vee G$. Therefore $C1 = (\neg P \vee A)$, $C2 = (\neg A \vee G)$, $C3 = (P)$.

3. Negate the goal: $C4 = (\neg G)$.

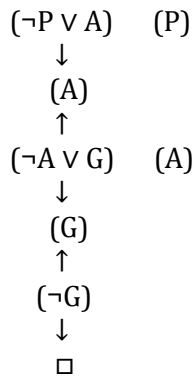

4. Resolution step 1: Resolve $C1 (\neg P \vee A)$ with $C3 (P)$. The complementary literals P and $\neg P$ cancel, giving $C5 = (A)$.

5. Resolution step 2: Resolve $C2 (\neg A \vee G)$ with $C5 (A)$. The complementary literals A and $\neg A$ cancel, giving $C6 = (G)$.

6. Resolution step 3: Resolve $C6 (G)$ with $C4 (\neg G)$. The complementary literals G and $\neg G$ cancel, giving $C7 = \square$.

Final conclusion: The Empty Clause is obtained. Hence, the negation of the goal is inconsistent with the knowledge base. Therefore, the user is granted access.

RUBRICS FOR CALCULATION

Numerical Problems					
Criteria	Weightage	Level 4 (Exemplary)	Level 3 (Proficient)	Level 2 (Developing)	Level 1 (Beginning)
Problem Understanding	20%	Clearly interprets problem, identifies all parameters and requirements accurately	Understands problem with minor gaps	Partial understanding; misses key elements	Misinterprets or unable to understand problem
Method Selection	20%	Selects most appropriate method/formula with strong justification	Selects correct method with minor errors	Inappropriate or partially correct method	Unable to select method
Solution Process	25%	Logical, systematic steps with correct approach throughout	Mostly correct steps with minor mistakes	Disorganized steps; multiple errors	No clear process
Accuracy of Calculation	20%	All calculations accurate; correct final answer	Minor calculation errors	Frequent errors; incorrect final answer	No valid calculations
Interpretation of Results	15%	Clearly interprets results with units and engineering relevance	Basic interpretation with minor omissions	Limited or unclear interpretation	No interpretation
